

PRODUCT UPDATE – November 2021 (last update 04.08.2022)

Spare parts for PENCIL NOZZLES

suitable for Case[®], CAT[®], John Deere[®], Ford[®] applications

We have recently added a bunch of new part numbers to our current mechanical nozzle line: PENCIL nozzles, originally designed by Caterpillar[®] and Stanadyne[®].

The 1963 introduction of the Pencil Nozzle was a major design change that reduced manufacturing costs and helped spur worldwide sales of Stanadyne[®]. In 1984 Stanadyne introduced the Slim Tip Pencil Nozzle that allowed Ford U.K. and the Japanese farm equipment manufacturer, Kubota, to reconfigure combustion chamber designs for higher horsepower and lower emissions.

There are three main Stanadyne-design pencil nozzle categories. Namely: **STPN** (Standard Pencil Nozzle), **PN** (Pencil nozzle slim with a 5.4 mm slim tip while the standard PN has a 9.5 mm tip) and **PN2** (Pencil Nozzle 2nd generation with larger spring chamber).
